

Spring and Autumn Organic Soil Conditioner

Velvit Ltd is pleased to introduce a special all new organic mini grade soil conditioner, made from plant extracts, which is designed to purify the soil before the on-set of spring growth and autumn/winter shut down. The aim of this product is to provide the soil with a building block of organic matter, which will stimulate all available nutrients to release steadily over a 6-8 week period whether retained or applied by use of a NPK fertiliser.

Benefits of organic plant extract

- Promotes establishment of Fescues, Bents and Rye grasses.
 - Improves root mass and increases nutrient uptake.
 - Increases plant tolerance to stress conditions.
- Encourages faster grow-in and establishment of new grass seedlings.
 - Increase resistance to and speedier recovery from disease.
 - Maintains plant count entering into a dormant period.
- Acts as a bio-stimulant, which will enhance microbial activity.
- Can be applied to all types of turf, greens, tees, fairways, sports pitches and general amenity turf.
 - Suitable for all type of soils.

Application

This product can be used all year round but we recommend application in early spring and early autumn/winter. We recommend you apply Purity evenly over the turf at 30gms/m² (300 kg /ha) To enhance and start the process we recommend this product to be watered in for 5-10 minutes. This is designed to wash the micro fine plant extracts into the turf and start the break down process.

Typical Analysis: Nitrogen: 1.10%; P₂O₅: 0.26%; K₂O: 0.94%; Magnesium: 0.02%; pH: 5.7

Contains Tea Seed Saponins

Supplied in 20 kg bags (1 x 20 kg bag will treat 660m² of turf)
